

Figure 4 — Regional and seasonal heterogeneity, and interval cost
NOT REPORTED for the 2021–2023 held-out window

Panels require a per-HUC2 regional breakdown, the eight temporal-coverage candidates, and the 90% coverage–width plane. None was computed for 2021–2023: the conventional holdout CSV is pooled (no HUC2 dimension) and the probability pipeline was not re-run (paper Table 4.9: not reported). No value is invented.
