

External arm and failure disposition, held-out 2021–2023

(a) External (site-ID-disjoint) cohort against the temporal cohort

(b) Failure disposition (0 sites excluded)

site status reason

— — no failures recorded

The external cohort is site-ID disjoint and history-dependent; it is not an ungauged-basin arm.

The outcome-QC waterfall (Table 4.10) is not reported for the held-out window.
